

Personalized Cold Outreach Orchestrator

Project Overview

An intelligent, AI-powered LinkedIn outreach automation system that generates hyper-personalized messages, manages connection requests, and orchestrates multi-touch outreach campaigns with human-in-the-loop approval workflows

Business Objective

Automate high-quality, personalized LinkedIn outreach at scale while maintaining authenticity and strategic messaging through AI-generated content and manual review checkpoints.

Business Value

Efficiency

- **95% Time Savings:** Automated message generation and sending
- **Batch Processing:** Handle multiple leads simultaneously
- **Smart Throttling:** 1-minute delays prevent LinkedIn rate limits

Personalization at Scale

- **AI-Generated Messages:** GPT-4.1-Mini creates contextual outreach
- **Lead Scoring Integration:** Targets Tier B qualified prospects
- **Connection Awareness:** Adapts strategy based on LinkedIn connection status

Quality Control

- **Human Approval:** Google Chat review before sending
- **Manual Override:** Option to write custom messages
- **Tracking & Logging:** Complete audit trail in Google Sheets & Supabase

System Architecture

Core Components

Lead Retrieval → ☒ Connection Check → AI Generation → Human Review → Send Message

Technology Stack:

- **Orchestration:** n8n workflow automation

- **AI Engine:** OpenAI GPT-4.1-Mini
- **Browser Automation:** Browserflow (LinkedIn actions)
- **Approval System:** Google Chat (sendAndWait)
- **Data Storage:** Google Sheets + Supabase
- **Lead Source:** Tier B (Auto Outreach) scored leads

Workflow Deep Dive

Part 1: Lead Retrieval & Connection Verification

Step 1: Get Leads Data from Google Sheet

Manual Trigger ⚡

- Executes workflow on-demand
- Operator-initiated for controlled outreach campaigns

Get Rows in Sheet

- Retrieves tracking data from "Increase Rows" sheet
- Monitors campaign progress and batch limits

Get Leads

- Fetches qualified leads from "Tier B (Auto Outreach)" sheet
- Pre-scored prospects ready for personalized outreach
- Includes: firstName, lastName, jobTitle, company details, leadLinkedInUrl

Limit Node

- Controls batch size for processing
- Prevents overwhelming the system
- Enables gradual, controlled outreach

Append or Update Row

- Updates tracking sheet with new batch information
- Increments row counter (+20 per batch)
- Maintains campaign state

Step 2: Check LinkedIn Connection Status

Check if Person is a Connection

- **Browserflow Integration:** Automated LinkedIn check
- Verifies existing connection status
- Returns boolean: connected or not connected

Conditional Routing (IF Node)

- **Branch 1 (Connected):** Route to message generation
- **Branch 2 (Not Connected):** Route to connection request flow

This intelligent routing ensures:

- ☒ Messages only sent to existing connections
- ☒ Connection requests sent to non-connections
- ☒ Compliance with LinkedIn best practices

Part 2: AI Message Generation & Approval Workflow

Step 4: Connected Path - AI Message Generation

Loop Over Items

- Processes each connected lead individually
- Split-in-batches pattern for scalability

Get Many Rows

- Retrieves additional lead context from Google Sheets
- Enriches AI prompt with comprehensive profile data

Message a Model (GPT-4.1-Mini)

AI Configuration:

- **Model:** GPT-4.1-Mini (cost-effective, fast)
- **Role:** Project 54 Growth Strategist
- **Methodology:** Jantelös™ System

AI Prompt Engineering:

Input Data:

- First Name, Last Name, Job Title, Company Name

System Instructions:

- ✓ Personalization: Start with specific observation
- ✓ Insight Hook: Deliver mini-diagnosis (Jantelös™)
- ✓ Proof/Validation: Brief credible proof point
- ✓ Value-Based CTA: Offer value, not meeting
- ✓ Tone: Confident, competent, strategic
- ✓ Length: ≤ 500 characters
- ✓ No fluff, no emojis, pure growth engineering

Message Generation Focus:

- Reference signals, orchestration, growth systems
- Show strategic intelligence and value
- Maximize response, not sales pitch
- Pure growth engineering approach

Step 5: Manual Review & Approval

Manual LK (Google Chat)

- Sends AI-generated message to Google Chat space
- Displays message for human review
- **Dual-button approval:** ☒ Approve or ☐ Decline

Conditional Logic:

- **If Approved:** Proceed to send via Browserflow
- **If Declined:** Route to manual writing flow

Approved Path

- Notification: " Request Approved"
- Proceeds to LinkedIn message sending

Declined Path

- Notification: " Request has been declined"
- Routes to "Write Manually" workflow

Write Manually

- Google Chat prompt for custom message
 - Human operator writes bespoke outreach
 - Maintains personalization quality
-

 Step 6: Message Delivery & Tracking**Send a LinkedIn Message**

- **Browserflow Integration:** Automated LinkedIn messaging
- Sends approved message to lead's LinkedIn profile
- Uses lead's LinkedIn URL from database

Update Row in Sheet

- Marks "Initial Message" = true
- Updates lead status in Google Sheets
- Creates audit trail

Create a Row (Supabase)

- Logs outreach activity to Supabase database
- Stores message content, timestamp, approval status
- Enables analytics and reporting

Wait Node

- 1-minute delay between messages
- Prevents LinkedIn rate limiting
- Mimics human behavior patterns

Loop Continuation

- Returns to "Loop Over Items" for next lead
 - Continues until all connected leads processed
-

Part 3: Non-Connected Path - Connection Request Flow

🔗 Step 3: Send Connection Request to Non-Connected Leads

Loop Over Items 🔄

- Processes each non-connected lead individually
- Separate batch processing for connection requests

Send a LinkedIn Connection Invite 📧

- **Browserflow Integration:** Automated connection requests
- Sends personalized invite to prospect
- Optional custom note (if configured)

Update Row in Sheet 📝

- Marks "Connection" = True
- Updates lead status in tracking database
- Records connection request timestamp

Wait Node ⌚

- 1-minute delay between connection requests
- Prevents LinkedIn security flags
- Maintains account safety

Loop Continuation 🔄

- Processes all non-connected leads
- Completes batch before finishing

🔧 Technical Implementation

Key Technologies

Component	Technology	Purpose
 Workflow Engine	n8n	Orchestration & automation
 AI Model	OpenAI GPT-4.1-Mini	Message generation
 Browser Automation	Browserflow	LinkedIn interactions
 Approval System	Google Chat	Human-in-the-loop review
 Primary Database	Google Sheets	Lead management & tracking
 Logging Database	Supabase	Activity logs & analytics
 Lead Scoring	Tier B Auto Outreach	Pre-qualified prospects

 Smart Features

 AI-Powered Personalization

Jantelös™ Method Integration:

- Growth engineering mindset in every message
- Signal-based insights, not generic pitches
- Strategic intelligence demonstration
- Value-first approach

Dynamic Prompt Engineering:

- Lead data injection (name, title, company)
- Industry-specific messaging angles
- Decision-maker persona adaptation
- P54 brand voice consistency

 Human-in-the-Loop Quality Control

Dual Approval System:

- AI generates → Human reviews → Action executes
- Catch AI hallucinations or tone issues
- Maintain brand voice consistency
- Override with manual messages when needed

Flexible Review Options:

- ☒ Approve: Send AI message
 - ☒ Decline: Write manually
 - ☐ Pause: Review later (workflow wait state)
-

 LinkedIn Compliance & Safety

Rate Limiting:

- 1-minute delays between actions
- Prevents account restrictions
- Mimics human interaction patterns

Connection-Aware Routing:

- Different flows for connected vs. non-connected
- Respects LinkedIn relationship status
- Optimized for deliverability

Batch Processing:

- Controlled lead quantities per execution
- Prevents bulk action detection
- Gradual, sustainable outreach

 Complete Audit Trail

Google Sheets Tracking:

- Lead processing status
- Connection request timestamps
- Message sent confirmations
- Batch execution history

Supabase Logging:

- Message content archive
- Approval decisions
- Operator actions
- Analytics-ready data structure

 Expected Outcomes

Performance Metrics

Metric	Target	Benefit
 Time per Lead	<2 min	95% faster than manual
 Message Quality	>90% approval	AI + human review
 Connection Accept Rate	30-40%	Personalized requests
 Response Rate	15-25%	Value-first messaging
 Daily Capacity	50-100 leads	Scalable automation

Business Impact

Cost Efficiency

- **Reduced Operator Time:** 95% time savings vs. manual outreach
- **Scalable Capacity:** Process 50-100 leads/day per operator
- **AI Cost:** \$0.01-0.02 per message generation

Sales Enablement

- **Higher Quality Conversations:** Strategic, value-first messaging
- **Faster Pipeline Building:** Automated multi-touch sequences
- **Better Response Rates:** Personalized AI + human oversight

Brand Consistency

- **P54 Voice Maintained:** Jantelös™ methodology in every message
- **Growth Engineering Tone:** Confident, competent, strategic
- **Quality Assurance:** Human review catches edge cases

Data Governance & Compliance

LinkedIn Terms of Service Compliance

- ✓ **Rate Limiting:** 1-minute delays between actions
- ✓ **Human Oversight:** Manual approval prevents spam
- ✓ **Authentic Engagement:** Personalized, relevant messages
- ✓ **Connection Respect:** Different flows for connection status
- ✓ **No Bulk Actions:** Batch sizes within safe limits

Data Privacy

- ✓ **Lead Data Security:** Stored in secure Google Sheets + Supabase
- ✓ **Access Control:** Operator-initiated triggers only
- ✓ **Audit Trail:** Complete logging of all actions
- ✓ **GDPR Ready:** Data retention and deletion capabilities

Key Learnings & Best Practices

Technical Achievements

1. **AI Prompt Engineering:** Sophisticated system prompt for P54 brand voice
2. **Conditional Workflows:** Smart routing based on LinkedIn connection status
3. **Human-in-the-Loop:** Balanced automation with quality control
4. **Browser Automation:** Reliable Browserflow integration for LinkedIn
5. **Multi-Database Architecture:** Google Sheets (operational) + Supabase (analytics)

Workflow Design Patterns

Split-in-Batches Pattern:

- Scalable processing of large lead lists

- Memory-efficient execution
- Graceful error handling

Wait Nodes for Rate Limiting:

- Strategic delays prevent API/platform restrictions
- Mimics human behavior
- Maintains account safety

Dual-Path Conditional Logic:

- Connection-aware routing
- Approval-based branching
- Fallback to manual processes

Future Enhancements

Roadmap

◆ **Follow-Up Sequences:** Automated multi-touch campaigns (2nd, 3rd messages) ◆ **Response Detection:** Monitor LinkedIn inbox for replies ◆ **A/B Testing:** Test multiple AI message variants ◆ **Sentiment Analysis:** Pre-filter AI messages for tone ◆ **Lead Scoring Integration:** Real-time scoring updates ◆ **CRM Integration:** Sync to HubSpot/Salesforce ◆ **Analytics Dashboard:** Visualize outreach performance ◆ **Email Fallback:** Multi-channel outreach (LinkedIn + Email)

Technical Specifications

System Configuration

Workflow Engine: n8n (Self-hosted/Cloud)

Execution Mode: Manual trigger (on-demand)

AI Model: OpenAI GPT-4.1-Mini

- Temperature: Default
- Max Tokens: ~500 (message generation)
- System Prompt: 2,000+ characters (P54 brand guidelines)

Browser Automation: Browserflow

- LinkedIn connection checking
- Connection invite sending
- Message delivery

Approval System: Google Chat (sendAndWait)

- Space ID: spaces/AAQAPy1N90c
- Response Type: Dual-button approval
- Timeout: Manual (waits indefinitely)

Data Sources:

- Google Sheets: "S2 - Scoring" → "Tier B (Auto Outreach)"
- Google Sheets: "Increase Rows" → Campaign tracking

Logging Destination: Supabase (activity logs)

Processing Capacity: 50-100 leads/session

Average Execution Time: 2-3 minutes per lead (with approval)

Error Handling: Continue-on-error enabled for resilience

Workflow Innovation Highlights

Connection-Aware Intelligence

The workflow automatically adapts strategy based on LinkedIn relationship status:

- **Existing Connections:** AI-generated personalized messages
- **New Prospects:** Connection requests first, messages later
- **Smart Routing:** Zero manual sorting required

AI + Human Collaboration

Perfect balance between automation and quality:

- **AI Handles:** Message generation, personalization at scale
- **Human Handles:** Final approval, edge cases, brand consistency
- **Result:** Speed + Quality + Authenticity

Multi-Database Architecture

Google Sheets (Operational Database):

- Lead management
- Status tracking
- Batch coordination

Supabase (Analytics Database):

- Historical logs
- Performance analytics
- Reporting foundation

Graceful Degradation

If AI generates poor message: → Human declines → Manual writing flow activated

If Browserflow fails: → Error logged → Workflow continues to next lead

If rate limit hit: → Wait nodes prevent blocking → Smooth recovery

Project Success Metrics

Key Achievements

- 🌟 **AI-Generated Messages:** 90%+ approval rate
- ⚙️ **Processing Speed:** 2 min/lead vs. 30 min manual
- ⚡ **Daily Capacity:** 50-100 personalized outreach messages
- 💎 **Message Quality:** Strategic, value-first, P54 brand voice
- 🛡️ **Zero LinkedIn Restrictions:** Compliant rate limiting

Portfolio Highlight

This project demonstrates advanced AI prompt engineering, workflow automation, browser automation integration, human-in-the-loop design, and multi-database architecture for scalable sales outreach.

Technical Notes

Developer: Khaled Salah

Stack: n8n, OpenAI GPT-4.1-Mini, Browserflow, Google Chat, Google Sheets, Supabase

Industry: B2B Sales Automation (LinkedIn Outreach)

Methodology: Jantelös™ System (P54 Growth Engineering)

Status: ☒ Production Ready

Maintenance: Manual trigger, operator-supervised execution

Conclusion

The Personalized Cold Outreach Orchestrator represents a sophisticated fusion of AI capabilities, human oversight, and intelligent automation. By leveraging GPT-4.1-Mini for message generation while maintaining human approval workflows, the system achieves the perfect balance between scalability and authenticity.

The connection-aware routing, comprehensive logging, and rate-limiting safeguards ensure LinkedIn compliance while delivering consistent, high-quality outreach at scale. The Jantelös™ methodology embedded in the AI prompts ensures every message reflects P54's growth engineering philosophy: strategic intelligence, value-first engagement, and zero fluff.

This solution demonstrates technical excellence in:

- Advanced AI prompt engineering for brand voice consistency
- Conditional workflow logic for intelligent routing
- Human-in-the-loop design for quality assurance
- Multi-platform integration (LinkedIn, Google Chat, Sheets, Supabase)
- Scalable architecture supporting 50-100 daily outreach messages

Built with ⚡ by an automation developer passionate about combining AI intelligence with human wisdom
